# Excellence in banding and sealing

Perfect for airline packaging

Jenton companies can advise on and supply innovative equipment and lines for heat sealing of trays, wrap or sandwich packs in addition to plain and branded banding to hold packs together.

All solutions are obviously and easily opened with minimum packaging waste for passengers to handle – and yet are held together securely prior to opening. Machines are flexible to allow multiple product / material options. Manual and semi automatic machines are available with line automation a possibility too.

Paper, plastic free and compostable alternatives are available. Machines and tooling are mostly made in house to minimise delivery time when this is a factor.

## Banding Machines

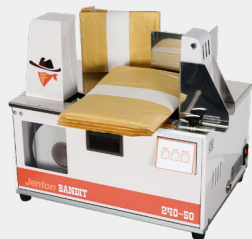

**MS 420**  
TABLE-TOP PAPER BANDING  
Tamper evident banding, ideal for multipacks

- Starts immediately no warm-up
- Handy, mobile machine
- Short front table for small formats
- Microprocessor controlled
